

Windows 10 Support Ends Soon

Is Your Business Ready?

Microsoft has announced the end of support for Windows 10. This means that as of **14 October 2025**, security updates, bug fixes, and technical support for Windows 10 will no longer be provided.

Are you prepared for the change?

Chat to us today about making a smooth transition to Windows 11. Choosing to remain on Windows 10 is a disruption risk to business and workflow due to apps not supporting updates on an outdated OS. In some cases, not updating may be a compliance breach, or pose security risks as non-updated security features leave your systems exposed to malicious attack or malware.

Benefits of making the transition to Windows 11:

- **New levels of security** - Hardware-based isolation, encryption and AI driven threat detection.
- **Enhanced performance**
- **New productivity tools** such as co-pilot and virtual desktop tools for hybrid working
- **Future ready** - New support and updates from Microsoft without the need for constant patches.

Overview

We offer expert Windows 10 EOL consulting to help make your business' transition to Windows 11 as smooth as possible. Our service includes customised upgrade planning and proactive lifecycle management, all designed to minimise disruption and maximise efficiency. To support your journey, we provide two assessment options:

Standard assessment

A straightforward assessment designed to help you evaluate your current IT environment and plan for Windows 10 EOL.

Comprehensive assessment

An in-depth assessment that goes beyond the fundamentals, providing deeper insights and tailored recommendations for optimising your transition to Windows 11.
